DATE MAILED: 01/25/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

PTO-90C (Rev. 10/03)

		Application No.	Applicant(s)
	Office Action Summary	09/728,693	JACOBS ET AL.
		Examiner	Art Unit
		Raquel Alvarez	3622

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE <u>3</u> MONTH(S) FROM
THE MAILING DATE OF THIS COMMUNICATION.
- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed
  after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
  Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any
  earned patent term adjustment. See 37 CFR 1.704(b).

Status

1)☒ Responsive to communication(s) filed on <u>20 October 2004</u>.

2a)☐ This action is **FINAL**.   2b)☒ This action is non-final.

3)☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is
    closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4)☒ Claim(s) <u>1-51</u> is/are pending in the application.

    4a) Of the above claim(s) _____ is/are withdrawn from consideration.

5)☐ Claim(s) _____ is/are allowed.

6)☒ Claim(s) <u>1-51</u> is/are rejected.

7)☐ Claim(s) _____ is/are objected to.

8)☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9)☐ The specification is objected to by the Examiner.

10)☐ The drawing(s) filed on _____ is/are: a)☐ accepted or b)☐ objected to by the Examiner.

    Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

    Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

11)☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12)☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

    a)☐ All   b)☐ Some * c)☐ None of:

      1.☐ Certified copies of the priority documents have been received.

      2.☐ Certified copies of the priority documents have been received in Application No. _____.

      3.☐ Copies of the certified copies of the priority documents have been received in this National Stage
         application from the International Bureau (PCT Rule 17.2(a)).

    * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1)☐ Notice of References Cited (PTO-892)

2)☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)

3)☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
    Paper No(s)/Mail Date <u>10/25/2004</u>.

4)☐ Interview Summary (PTO-413)
    Paper No(s)/Mail Date. _____ .

5)☐ Notice of Informal Patent Application (PTO-152)

6)☐ Other: _____.

DETAILED ACTION

1.   This office action is in response to communication filed on 10/20/2004.

2.   Claims 1-51 are presented for examination.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3.   Claims 1-51 are provisionally rejected under the judicially created doctrine

of obviousness-type double patenting as being unpatentable over claims 1-40, 111-113,

126-127, 136-137 and 146 of copending Application No.09/679,039. Although the

conflicting claims are not identical, they are not patentably distinct from each other

because the co-pending application further recites transmitting ad-statistical data.

Calculating and transmitting statistical data it is old and well known in business in order

to calculate and transmit statistical data in order to make educated assumptions and

statements on a particular subject. It would have been obvious to a person of ordinary

skill in the art at the time of Applicant's invention to have included transmitting ad-

statistical data in order to achieve the above mentioned advantage.

4.   Claims 1-51 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-48 of copending Application No.09/679,038. Although the conflicting claims are not identical, they are not patentably distinct from each other because the copending application further recites an ad link history display window that lists links to the sources of advertisements that the user has previously visited. Listing the sources of advertisements or information that the user has previously visited it is old and well known in order to keep track of the success of the different sources of advertisements. It would have been obvious to a person of ordinary skill in the art at the time of the invention to have included a display window that lists links to the sources of advertisements that the user has previously visited in order to achieve the above mentioned advantage.

5.   Claims 1-51 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-51 of copending Application No.10/645,232. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instant application further recites that the advertisement download communication link and the data communication link are separate communication links. It is old and well known in the communication and networking arts to have various communication links because such a modification would allow for easier transmission of data. It would have been obvious to a person of ordinary skill in the art at the time of the invention to have link are separate communication links in order to achieve the above mentioned advantage

6.   Claims 1-51 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-18 and 51-53 of copending Application No.09/668,553. Although the conflicting claims are not identical, they are not patentably distinct from each other because the co-pending application further recites transmitting ad obscured ad monitor function that determines whether an obscured ad condition has occurred, whereby the obscured ad condition occurs when an advertisement current being displayed on the display associated with the client device is being obscured by one or more other items currently being displayed on the display and an obscured nag function that generates an obscured ad nag display in response to detection of the obscured ad condition, wherein the obscured nag display notifies the user of the obscured ad condition. Since, monitoring and displaying various advertisements which can occupy the entire portion of the display along with banner advertisements is obvious in on-line advertisements then it would have been obvious to a person of ordinary skill in the art at the time of Applicant's invention to have included detecting if a displayed advertisement such as a banner advertisements is being obscured by an advertisement and notifying the user in order for the user to be aware that might not be compensated for viewing the banner advertisements that is being obscured by the advertisement.

7.   Claims 1-51 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 18-33, 59 and 62 of copending Application No.09/668,331. Although the conflicting claims are not identical, they are not patentably distinct from each other because the co-pending

application further recites a playlist that identifies the advertisements to be downloaded. Identifying or selecting the advertisements to be downloaded is obvious and well known in order to provide some sort of order within the system. It would have been obvious to a person of ordinary skill in the art at the time of Applicant's invention to have included transmitting ad-statistical data in order to achieve the above mentioned advantage.

8.   Claims 1-51 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 46-70 and 74-76 of copending Application No.09/668,632 Although the conflicting claims are not identical, they are not patentably distinct from each other because the co-pending application further recites an e-mail function for receiving and sending e-mail to other client devices. Sending and receiving e-mail to other clients is old and well known in the computer related arts in order to receive messages immediately from other clients . It would have been obvious to a person of ordinary skill in the art at the time of Applicant's invention to have included receiving and sending e-mail messages in order to achieve the above mentioned advantage.

9.   Claims 1-51 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 36-70, 74-76 and 78 of copending Application No.09/668,515.Although the conflicting claims are not identical, they are not patentably distinct from each other because the present application further recites three operating modes. Different operating modes such as Online and offline operating modes are known in the computer related arts in order to provide different states of the program. It would have been obvious to a person of

ordinary skill in the art at the time of Applicant's invention to have included receiving and

sending e-mail messages in order to achieve the above mentioned advantage.

10.   Claims 1-51 are provisionally rejected under the judicially created doctrine of

obviousness-type double patenting as being unpatentable over claims 1,9-11,14-

24,43,45-54,77-79,81,82,84,86-92,94,95,97-105,107-109 and 111 of copending

Application No.09/668,631. Although the conflicting claims are not identical, they are

not patentably distinct from each other because the co-pending application further

recites a playlist that identifies the advertisements to be downloaded. Identifying or

selecting the advertisements to be downloaded is obvious and well known in order to

provide some sort of order within the system. It would have been obvious to a person of

ordinary skill in the art at the time of Applicant's invention to have included transmitting

ad-statistical data in order to achieve the above mentioned advantage.

11.   Claims 1-51 are provisionally rejected under the judicially created doctrine of

obviousness-type double patenting as being unpatentable over claims 1-53 of

copending Application No.09/668,600. Although the conflicting claims are not identical,

they are not patentably distinct from each other because the instant application further

recites a third operating mode in which the software switches the operating from a first

operating mode to a second operating mode, wherein the second operating mode has

less features than the first operating mode. Official notice is taken that it is old and well

known in the computer related arts to switch from one operating mode to another

operating mode that has less features when a problem arises with one of the operating

mode because such a modification would allow the software to operate with less

features and in that case less problems are less likely to occur. It would have been

obvious to a person of ordinary skill in the art at the time of Applicant's invention to have

included switching from a first operating mode to a second operating mode, wherein the

second operating mode has less features than the first operating mode in order to

obtain the above mentioned advantage.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that

form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

12.   Claims 1-4, 9-10, 15-17, 23-25, 27-30, 33-34, 41-48 and 50 are rejected under

35 U.S.C. 102(b) as being anticipated by Marsh et al. (5,848,397 hereinafter Marsh).

With respect to claims 1, 15, and 33, Marsh teaches a method for operating a

client device that is configured for communications via a communications network

(Abstract). Effecting an advertisement download communication link between the client

device and an advertisement distribution server system, via the communications

network, at selected advertisement download times (see figure 4 and col. 3, lines 28-

37); effecting a data communication link with a data communications service provider,

via the communications network, wherein the advertisement download communication

link and the data communication link are separate communication links (Figure 4);

downloading advertisements from the advertisement distribution server system via the

advertisement download communication link (Figure 4); storing downloaded

advertisements on a storage medium associated with the client device (col. 14, lines 1-

10); displaying at least selected ones of the stored advertisements, in accordance with

ad display parameters prescribed by the advertisement distribution server system

(Figure 6, 702).

With respect to the newly added feature of the data communications service

provider being separate and independent from the advertisement distribution server

system.   In Marsh, the advertisements (server system 108) are separate from the data

communication (e-mail messages)(server system 107)(see Figure 8).

With respect to claims 2, 16-17 and 45, Marsh further teaches that the method is

installed on the client system and the advertisement distribution server system is

controlled by a vendor of the software (col. 3, lines 12-56).

With respect to claims 3 and 49, Marsh further teaches that the communication

network comprises the Internet (Figure 1 and col. 6, lines 16-29).

With respect to claim 4, Marsh further teaches that the software is subsidized by

revenues attributable to the downloaded advertisements (col. 3, lines 66-, col. 4, lines 1-

6).

With respect to claims 9-10, Marsh further teaches that the advertisements

include main screen advertisements and toolbar advertisements (Figure 4).

With respect to claims 23-25, Marsh further teaches that the display parameters specify for each ones of the advertisements, how many times the advertisement is to be displayed for a given time period, and how long that advertisement is to be displayed each time that it is displayed (col. 3, lines 28-37).

With respect to claims 27-30, Marsh further teaches that the ad display parameters specify, the total/cumulative amount of time that advertisements are to be displayed (col. 3, lines 28-37).

With respect to claim 34, Marsh further teaches generating a cookie containing information describing user/client device behavior and user demographics (col. 14, lines 66-, col. 15, lines 1-7); and transmitting the information to the at least one playlist server (Figure 8 and col. 15, lines 10-20).

With respect to claims 41-44, Marsh further teaches a playlist customized based on the user demographics and/or user device behavior col. 3, lines 12-27).

With respect to claims 46-48, Marsh further teaches that the software is e-mail Software (see Figure 8).

With respect to claim 50, Marsh further teaches that the display of the at least ones of the stored advertisements comprises displaying the at least selected ones of the stored advertisements when the client device is offline (col. 6, lines 63-, col. 7, line 1).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set
forth in section 102 of this title, if the differences between the subject matter sought to be patented and
the prior art are such that the subject matter as a whole would have been obvious at the time the
invention was made to a person having ordinary skill in the art to which said subject matter pertains.
Patentability shall not be negatived by the manner in which the invention was made.

13.   Claims 5-8, 11-14, 18-22, 26, 31-32, 35-40 and 51 are rejected under 35 U.S.C.

103(a) as being unpatentable over Marsh et al. (5,848,397 hereinafter Marsh).

With respect to claims 5-8, 11-12, 26, 31-32 and 51, Marsh further teaches the

maximum time that the associated advertisements is to be displayed each time that it is

displayed (col. 3, lines 28-37 and col. 14, lines 66-, col. 15, lines 1-20); the maximum

cumulative time that the associated advertisement is to be displayed (col. 3, lines 28-37

and col. 14, lines 66-, col. 15, lines 1-20).

With respect to the maximum number of times per day that each stored

advertisement is to be displayed and the date/time before which each stored

advertisement is to be displayed and the end date/time after which each stored

advertisement should not be displayed. Official notice is taken that it is old and well

known in advertisements/marketing to make certain determinations such as the

maximum number of times per day that each stored advertisement is to be displayed

and the date/time before which each stored advertisement is to be displayed and the

end date/time after which each stored advertisement should not be displayed in order to

target the correct time when the advertisements should be displayed and the right time

that the advertisements should not be displayed in order to better target the correct time

for the advertisements.

Claim 13 further recites displaying at least ones of the advertisements in a linear

manner. Official notice is taken that it is old and well known to display in a linear

manner in order to provide an output that is proportional. It would have been obvious to

a person of ordinary skill in the art at the time of Applicant's invention to have included

recites displaying at least ones of the stored advertisements in a linear manner in order

to achieve the above mentioned advantage.

Claim 14 further recites displaying at least ones of the advertisements in a

random manner. Official notice is taken that it is old and well known to perform a

function at random in order to protect the data been transmitted. It would have been

obvious to a person of ordinary skill in the art at the time of Applicant's invention to have

included displaying the advertisements in a random manner in order to obtain the above

mentioned advantage.

With respect to claims 18-22, 35-40, Marsh further teaches at least one of the ad

display parameters is a face time duration parameter that specifies a face time duration

for at least one of the stored advertisement (col. 3, lines 28-36) and the step of

displaying at least selected ones of the stored advertisements comprises displaying the

at least one of the stored advertisements for the face time duration prescribed by the

associated face time duration parameter (col. 3, lines 28-36).

With respect to the face time duration comprising a time period during which at least a

prescribed minimum level of user activity is detected. Since Marsh teaches maintaining

information on the user activity and interactivity with the advertisements (col. 14, lines

66-, col. 15, lines 1-7) then it would have been obvious to a person of ordinary skill in

the art at the time of Applicant's invention to have included using the user activity of

Marsh to determine the face time duration of the advertisements during which at least a

prescribed minimum level of the user activity is detected because such a modification

would help in determining and better targeting the ads based on the user's activity.

Response to Arguments

14.   Applicant argues that Marsh doesn't teach that data communications service

provider is separate and independent from the advertisement distribution sever system.

The Examiner disagrees with Applicant because in Marsh, the advertisements (server

system 108) are separate from the data communication (e-mail messages)(server

system 107)(see Figure 8).

15.   Applicant argues that in Marsh, the delivering of the advertisements and the data

communications are merged together in a single seamless channel. The Examiner

agrees with Applicant's assertion but wants to point out that in Marsh before the

advertisements and e-mail messages are stored in sever system 104, the

advertisements and the e-mail messages are independently controlled by the different

entities 108 and 107. Therefore, it meets the claimed language "the data

communications service provider being separate and independent from the

advertisement distribution server system"

Point of contact

16. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Raquel Alvarez whose telephone number is (703)305-

0456. The examiner can normally be reached on 9:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Eric w Stamber can be reached on (703)305-8469. The fax phone number

for the organization where this application or proceeding is assigned is 703-872-9306.

For the upcoming move to the new Alexandria office, everyone has been

assigned new phone and RightFax numbers. My new phone number will be : 571-272-

6715, my supervisor's phone number will be: 571-272-6724.. This changes will not

happen until April 2005 (or later) and therefore our current numbers are still in service

until the move.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
